#### **How To Make Transitions in the Animator Window**

Repeat Steps 01 - 04 To Add More Transitions

04 STEP

### **Assign Condition**

In the Inspector, under Conditions

- Click the plus icon
- In the drop down, select parameter
- Select the logical operator
- Set the value
- Save project

03 STEP

# Adjust Transition Properties

- Left click the white transition arrow
- In the Inspector, uncheck "Has Exit Time"
- Uncheck "Fixed Duration"
- Set "Transition Duration" to 0

02 STEP

#### **Create Transition**

- Right click the "FROM" box
- Select "Make Transition"
- Drop the white arrow onto "TO" box and left click to confirm

01 STEP

## Decide the Transition Flow

Decide FROM which box or animation state TO which box do you want to create the transition

Eg. You want the animation to change from Idle to Running. Then FROM = Idle & TO = Running

#### Note:

- Step 3 removes delay between animation changes. If you want delay, ignore this step
- Make sure you have created one or more parameters based on which the transitions will happen
